ArcGIS 10.1 Training Materials Development

Numerous projects are undertaken in the Lake Michigan watershed each year. Most of the activities address local problems, regional assets, or future undertakings that can be related to specific locations around the region. Whether the projects deal with natural resource management, environmental restoration and conservation, or economic development, all have a component of location that can be documented with a database and graphically visualized using Geographic Information Systems (GIS).

This venture was embarked upon to provide basic, no cost, GIS instruction via ArcGIS software, to personnel and organizations in the Lake Michigan Coastal region in a small class setting. Two full-day, ArcGIS training sessions were held on June 23 & 24, 2014, at the Indiana University Northwest Library computer lab. Participants representing Northwest Indiana municipal, county, National Park Service, academia, and environmental organizations attended the training. The goal was to train 10 – 15 participants.

RESULT: Development of ArcGIS 10.1 Training Materials.
